ABOUT ME

I graduated from HKUST with an M.Phil degree in Mathematics, worked in both academic and nonacademic fields, with solid knowledge in frontend and backend programming. Passionate about solving problems in my daily life.

EXPERIENCE

Software Engineer

Mid of May 2023 ~ Present

Wonderbricks Limited, Hong Kong

AWS S3, Cloudfront, Lambda, EC2-loadbalancer, ECS-Fargate, Route53, API-Gateway, RDS

Backend Express, Mongoose, Socket.io, Algolia, Googleapis + Nodemailer, Prisma, Prisma-Kysely, Expo Push Notification, MySQL, PostgreSQL, MongoDB, RabbitMQ, Redis

Scope of Works.

WEB APPLICATION

Frontend.

- Build, revamp and maintain React projects in Typescript

Backend.

- Maintain SpringBoot project, build APIs using MyBatis and mongo-java-driver

MOBILE APPLICATION

Frontend.

- Develop this realtime text-messaging and LLM based project from scratch by React-Native and EXPO
- Create reusable components by proper props design and packaging into a class
- Create custom interactive components by React-Native-Reanimated

Backend.

- Develop entire backend application from scratch by nodejs, express, socketio, etc
- Develop Lambda functions in python and nodejs for generating report in excel and word
- Designed middleware to let user send text, audio, images via REST apis and get the messages in the room they joined via socket.io
- Implement jwt authentication and refresh-token mechanism in both front and backend
- Develop Push notification system for ios and android
- Design tables for our backend to fulfill challenging requirements from product manager
- In table design, make careful consideration on the data-type of primary keys. Replaced the purely random UUID by ULID to improve performance of insertion
- Unify the structure of API response so that the frontend can handle errors gracefully
- Migrate schema of PostgreSQL DB via Prisma. Have good experience of creating, resolving, and testing migration scripts in dev and non-dev environments

System Design.

- Develop message queue system using RabbitMQ to:
 - Rate limit api which has a limit of 100 concurrent calls (azure openai service)
 - Delay actions by means of DeadLetter Queue
- Develop a class in the above message queue system to organize consumption logic, error-report logic and msg-publishing logic in a type-safe way
- Develop a caching system (and a class) to GET and SET cached value in a manageable way
- Develop in-app notification to separate user-specific data from our API, making those API cachable (userId independent)

iOS Deployment to AppStore with EXPO.

- Internal Ad-Hoc Distribution
- Store Build for publishing to App Store Connect
- Internal and External Test via TestFlight
- App Submissions and Rejections
- Managed everything above with 4 stages (DEV, UAT, POC, PROD) with different bundle-identifier, ascAppId, version and buildNumber, env (EXPO_PUBLIC_XXX's)

DevOps / CICD.

- Create automated deployment workflows for frontend and backend via github actions. Which includes:
